<u>Amendments to the Claims</u>

Please add claims 23-25 and amend claims 1-7, 9, 10-14, 17, 19-20, and 22 as follows:

1. (Currently Amended)   A computer implemented method of generating a document, comprising:

providing a first user interface with which a first user may generate a document template;

providing a second user interface with which a second user may generate a content file

related to the document template, ~~the~~ a functionality available through the   the

second user interface being determined by a user other than the second user;

~~and~~

combining the document template and the content file to generate the document;

<u>determining a context of the document; and</u>

<u>modifying, responsive to the context, the document to generate a modified document.</u>

2. (Currently Amended)   The method of claim 1, wherein the functionality ~~of~~ <u>available through</u> the second user interface is determined by the first user.

3. (Currently Amended)   The method of claim 1, wherein[[:]] the document template and the content file are stored at a first server~~; and after combining the document template and~~ ~~the content file to generate the document, the document is sent to a second server.~~, <u>and further</u> <u>comprising sending the modified document to a second server.</u>

4. (Currently Amended)   The method of claim 1, wherein the functionality available through the second user interface comprises functionality <u>to allow the second user</u> to create content files related to ~~at least one~~ <u>a first</u> document template ~~specified by the first user~~.

5. (Currently Amended)   The method of claim 4, wherein the functionality available through the second user interface ~~does not include~~ <u>further comprises</u> functionality <u>to prevent the second user</u> ~~to create~~ <u>from creating</u> content files related to a second document template ~~that is not specified by the first user~~.

6. (Currently Amended)   The method of claim 1, further comprising receiving, through the first user interface, ~~data defining~~ the document template.

7. (Currently Amended)   The method of claim 6, wherein ~~the data defining~~ the document template ~~further~~ defines what data is entered to generate the content file related to ~~that template file~~ <u>the document template</u>.

8. (Original)   The method of claim 6, wherein ~~the data defining~~ the document template ~~further~~ defines the functionality available through the second user interface.

9. (Currently Amended)   The method of claim 1, further comprising receiving, through the second user interface, data defining the content file.

10. (Currently Amended)   A document production system, comprising:
a user interface module for:

 providing a first user interface to a first user with which the first user may

  generate a document template; and

 providing a second user interface to a second user with which the second user

  may generate ~~at lease one~~ <u>a</u> content file related to the document template, ~~the~~

  <u>a</u> functionality available through the second user interface being ~~selected~~

  <u>determined</u> by a user other than the second user;

a database for storing the document template and the ~~at least one~~ content file;

a document module connected to the user interface module for combining the document

template and the content file to generate a document; ~~and~~

a context module for determining a context of the document;

a modification module for modifying, responsive to the context, the document to generate

a modified document; and

a publish module for outputting the ~~generated~~ modified document.

11. (Currently Amended)   The system of claim 10, wherein the functionality available

through the second user interface comprises functionality to allow the second user to create a

plurality of content files related to ~~at least~~ a first document template~~, the identity of the first~~

~~document template specified by the first user~~.

12. (Currently Amended)   The system of claim 11, wherein the functionality available

through the second user interface ~~does not include~~ further comprises functionality to prevent the

second user ~~to create~~ from creating content files related to a second document template ~~that is not~~

~~specified by the first user~~.

13. (Currently Amended)   The system of claim 10, wherein the user interface module

receives, through the first user interface, ~~data defining~~ the document template.

14. (Currently Amended)   The system of claim 13, wherein ~~the data defining~~ the

document template ~~further~~ defines what data is entered to generate the content file related to ~~that~~

~~template file~~ the document template.

15. (Original) The method of claim 13, wherein ~~the data defining~~ the document template

~~further~~ defines the functionality available through the second user interface.

16. (Original) The system of claim 10, further comprising a file manager module for storing a relationship between the document template and the content file.

17. (Currently Amended)   A computer implemented method of generating a document, comprising:

receiving ~~data defining~~ a document template;

receiving content data ~~to be added to the document template; and~~

combining the document template ~~to~~ and the content data to generate the document; ~~ari~~

receiving a context of the document; and

modifying, responsive to the context, the document to generate a modified document.

18. (Original) The method of claim 17, wherein the content data is received through a user interface having functionality defined by a first user.

19. (Currently Amended)   The method of claim 17, wherein:

the content data is received through a user interface having a functionality defined by a

first user; and

~~the data defining the document template further defines the functionality available~~

~~through the user interface~~ the functionality is determined by the document

template.

20. (Currently Amended)   The method of claim 17, wherein ~~the data defining~~ the document template ~~further~~ defines what data types comprise the content data.

21. (Original) The method of claim 18, wherein the content data is received from a second user.

22. (Currently Amended)   The method of claim 18, wherein the functionality defined by the first user includes functionality allowing the second user to add content data to a document template specified by the first user, but ~~not~~ <u>preventing the second user from adding content data to</u> other document templates not specified by the first user.

23. (New)   The method of claim 1, wherein the context comprises one of a group containing a page preview, a local publish, an external publish, a local stage, and an external stage.

24. (New)   The method of claim 10, wherein the context comprises one of a group containing a page preview, a local publish, an external publish, a local stage, and an external stage.

25. (New)   The method of claim 17, wherein the context comprises one of a group containing a page preview, a local publish, an external publish, a local stage, and an external stage.
